

SYED HUSSAIN

FULL STACK DEVELOPER

CONTACT

347-891-6304

syedf.hussain7@gmail.com

St. Louis, MO 63021

SKILLS

- Java, JSP, JUnit
- Spring Boot
- Hibernate
- Angular, React
- JavaScript
- MySQL, PostGres
- AWS (ECS, Fargate, EC2, S3)
- Jenkins
- Git/GitHub/GitLab
- RAG (Retrieval-Augmented Generation)

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 4+ years of experience delivering scalable, high-performance applications across frontend, backend, and cloud environments. Skilled in Java, Python, Angular, Spring Boot, and modern integration architectures. Proven track record in Agile development, CI/CD automation, and cloud-native deployments.

EXPERIENCE

August 2025 - Present

Full Stack Developer

Accenture Federal Services (Project FearItself), St Louis, MO

- Engineered a Retrieval-Augmented Generation pipeline using Python (FastAPI/Flask) and React, enabling real-time querying of private datasets with context-aware LLM responses.
- Integrated vector databases to manage high-dimensional embeddings, ensuring low-latency retrieval of relevant document context for the LLM.
- Developed a robust CI/CD workflow using Jenkins, automating the build process from GitHub commits to containerized image creation.
- Streamlined application delivery using ArgoCD for declarative deployments, ensuring the state of the Kubernetes (K8s) cluster remained synchronized with the Git repository.
- Partnered with the Cloud Infrastructure team to optimize resource allocation within K8s clusters, troubleshooting deployment manifests and ensuring high availability for the AI inference engine.

March 2025 - July 2025

Full Stack Developer

Accenture Federal Services (Project Midnight Express), St Louis, MO

- Architected and developed robust backend-to-backend integrations using Spring Boot, leveraging RestTemplate and RetryTemplate to ensure high availability and fault tolerance for client data exchanges.
- Containerized microservices using Docker and orchestrated deployments via AWS ECS (Fargate), streamlining the CI/CD pipeline and reducing infrastructure overhead.
- Engineered a comprehensive testing suite using JUnit and Postman, maintaining high code quality standards and ensuring 100% endpoint reliability before production delivery.
- Standardized technical documentation within Confluence, including system architecture and integration workflows, which accelerated cross-team onboarding and system maintainability.

February 2024 - February 2025

Full Stack Developer

Accenture Federal Services (Project Hemingway), St Louis, MO

- Developed and modernized full-stack web applications by bridging legacy JSP pages with dynamic AngularJS components, improving user interface responsiveness and front-end modularity.
- Engineered scalable backend services using Spring Boot and Hibernate, optimizing data persistence layers in MySQL and streamlining communication with external systems via WSDL-based web services.
- Automated software delivery lifecycles by configuring Jenkins CI/CD pipelines, reducing manual deployment errors and accelerating feature release cycles.
- Optimized system reliability by utilizing Splunk for log analysis and proactive troubleshooting, identifying and resolving production bottlenecks in collaboration with QA teams.
- Facilitated Agile development workflows within JIRA, consistently meeting sprint deadlines and ensuring high-quality API delivery through rigorous Postman validation.

October 2021 - January 2024

Full Stack Developer

LENET, New York, NY

- Participated in all phases of the SDLC, contributing to design, development, and testing of scalable enterprise applications.
- Developed responsive UI using Angular 17, TypeScript, HTML5, and SCSS, enhancing UX consistency.
- Migrated legacy AngularJS and jQuery components to modern Angular 17 modules, improving maintainability.
- Created and connected RESTful endpoints using Spring Boot; built backend logic with Java, Spring MVC, Hibernate, and MySQL.
- Conducted API testing with Postman and SOAPUI; automated builds and deployments using Jenkins and Docker.
- Collaborated cross-functionally in Agile teams; contributed to sprint planning, reviews, and JIRA workflows.

EDUCATION

January 2015

Bachelor of Business Administration

CUNY Lehman College

CERTIFICATIONS

- AWS Cloud Practitioner
- Google Cloud Practitioner
